

In the second year of my ambassadoring for the NSF APNA program, I returned to the school where I taught in my first year of the program. I was thoroughly pleased to find out that the students had been practicing what I had taught them and remembered all of my teachings. I was even more happy to know that the students were excited at my return.

This year, having already assessed their capabilities the year before, I decided to begin by reviewing the methods of pronunciation I taught them last year and then went into some math, which is one of my strongest subjects.

I decided to teach some simple algebra, but I met some difficulty as I quickly learned that they had trouble understanding some of the concepts in English as they had only learned in in Telugu. However, it was not hard for me to make the adjustments and soon, the students were able to understand and do some basic algebra problems.

Overall, I had a lot of fun and consider myself privileged to have been able to ambassador for NSF for two consecutive years.
